Agenda for 10/645,813

09/07/2005

1. Claims to be discussed
   Claim 24

2. Limitations of the claims to be discussed

"a first type protocol processing unit .... the first type file access request includes a path ID indicating a directory including a target file and a first type file ID indicating the target file, and the first type file ID is a unique ID in the directory;

a second type file system access unit which is configured to receive a file access request from the first type protocol processing unit and issue a second type file access request to a second type file system, wherein the second type file access request includes a second type file ID indicating the target file, and the second type file ID is a unique ID in the second type file system and assigned to the target file by the second type file system;"

This limitation shows that the path ID, the first type file ID and the second type file ID is assigned to the target file to be accessed and the second-type-file-system-access first type protocol processing unit converts a pair of the path ID and the first type file ID to the second type file ID for accessing to the target file.

3. References to be discussed
   USP 6,453,354 (Jiang: cited by Examiner)

4. Continuation Application 11/201,252

If time permits, we would like to present and discuss claims for this continuation application to help facilitate the Examiner's search and examination.
